Year 1

What I should already know

Weather

Vocabulary

There are different types of weather.

Leaves fall off trees (in autumn).

Temperature is measured with a thermometer in °C (degrees Celsius).

season	The part of the year with particular weather patterns
spring	The season when plants begin to grow – March to May
summer	The warmest season of the year from June to August
autumn	The season after summer when trees begin to lose their leaves – from September to November
winter	The coldest season – from December to February
weather	The temperature, wind and rain (simplified) at a particular time
change	To become different/not stay the same.
observe	To notice something

The Four Seasons

Spring: In spring, the weather starts to get warmer after winter. Lots of baby animals are born and new flowers blossom.

Spring months are March, April and May.

Summer: Summer is the warmest season of the year. Insects such as wasps and bees are around, and plants have lots of leaves. There are lots of flowers around, as well as insects.

The summer months are June, July & August. In summer, days are lighter for longer.

Autumn: In autumn, the weather starts to get cooler. Apples are ready to pick from trees. Leaves on deciduous trees begin to change colour and fall. Squirrels collect nuts and acorns. Hedgehogs start to hibernate. Autumn is September, October & November.

Winter: Winter is the coldest season of the year. Deciduous trees have no leaves, but evergreen trees still have leaves.

Winter months are December, January & February. In winter, there are fewer daylight hours, so days seem shorter.
